

Lajenda Open Dental is a powerful dental practice management software package. It is based on Open Dental, an open source software, originally developed by Dr. Jordan S. Sparks as a low cost alternative to the many very expensive dental management software packages.

Open Dental provides comprehensive state-of-the-art technology solutions for dental offices to help increase practice productivity, office efficiency, and improve cash flow. The Open Dental database contains an abundance of information: patient data, procedure and diagnosis codes, insurance information, financial data etc... You can take advantage of this information to optimize your resources and make the best decisions for your business.

Lajenda Networks uses the open source development model to make useful software faster, reliable, inexpensive, and backed by quality service you can trust. We are working actively to add and release new features.

We can help you to deploy Open Dental in new offices or convert data from your existing practice software to Open Dental.
